

Course Specification

BEng (Hons) Electronic and Electrical Engineering

Course Code: BENEE

2026/27

BEng (Hons) Electronic and Electrical Engineering (BENEE)

Applicant Facing Course Specification for 2026/27 Undergraduate Entrants

Confirmed at

General Information

Award	Bachelor of Engineering with Honours Electronic and Electrical Engineering
Contained Awards	Bachelor of Science Electronic and Electrical Engineering (Level 6) Diploma of Higher Education Electronic and Electrical Engineering (Level 5) Certificate of Higher Education Electronic and Electrical Engineering (Level 4)
Awarding Body	Leeds Beckett University
Level of Qualification and Credits	Level 6 of the Framework for Higher Education Qualifications, with 120 credit points at each of Levels 4, 5 and 6 of the UK Credit Framework for Higher Education (360 credits in total).
Course Lengths and Standard Timescales	Start dates will be notified to students via their offer letter. The length and mode of delivery of the course is confirmed below: <ul style="list-style-type: none">• 3 years (full time, campus based)• 4 years (full time with sandwich year, campus based)• 6 years (part time, campus based)
Part Time Study	PT delivery is usually at half the intensity of the FT equivalent course, although there may be flexibility to increase your pace of study to shorten the overall course duration. Some modules may be delivered in a different sequence to that defined within this information set but the modules offered within each level are consistent. Please note that the work placement option is not generally available to PT students.
Location(s) of Delivery	The majority of teaching will be at Headingley campus but on occasion may be at City campus. Students are responsible for obtaining their own placement, with assistance from the University. The locations will vary, dependant on the opportunity.

Entry Requirements

Admissions criteria are confirmed in your offer letter. Details of how the University recognises prior learning and supports credit transfer are located here: <https://www.leedsbeckett.ac.uk/student-information/course-information/recognition-of-prior-learning/>

Admissions enquiries may be directed to: AdmissionsEnquiries@leedsbeckett.ac.uk.

Course Fees

Course fees are confirmed in your offer letter. A breakdown of any additional costs is included on the online prospectus entry for this course.

Fees enquiries may be directed to Fees@leedsbeckett.ac.uk.

Policies, Standards and Regulations (www.leedsbeckett.ac.uk/academicregulations)

1. In line with a recent Engineering Council directive, a Regulation Exemption has been approved by the University which states that:

“Students must pass all modules which are mapped to Accreditation of Higher Education Programme (AHEP) learning outcomes with an overall mark of not less than 40% in the combined assessments, with a submission in each component for each module.

If students do not achieve these marks at the first attempt they will have the chance to undergo a re-sit in that particular area; if they still fail to achieve the marks at this attempt they will not be allowed to progress onto the following year until they have completed the module again and achieved the above mark.

Failure at the second attempt at a module will result in a student’s withdrawal from the course.”

2. For this award, there is an Admissions exemption for this course, which was agreed on the 2018-11-14

[The Level 3 tariff] must include 40 points from a Maths or Science related subject. If you are studying Biology, Chemistry or Physics to meet this requirement you must also achieve a 'Pass' in the practical assessment, where that practical assessment is separated (from 2017)

Note: The correct title for the Level 6 contained award of the ordinary degree is *BSc Electronics and Electrical Engineering*. This Level 6 contained award **does not** satisfy the PSRB requirements for an accredited degree programme as it does not fully meet the Engineering Council’s guidance on the assessed learning outcomes for IEng under the *Accreditation of Higher Educational Programmes* version 3.0. The change in the title of the award is therefore necessary to differentiate between the main award and the contained award.

Specifically, the title of any contained award **must** adhere to the Accreditation Policy R1, *Programme Title*, of the IET (Academic Accreditation Information Pack for Higher Education Institutions, Academic Accreditors and Professional Engineering Institution Staff. The Institution of Engineering and Technology, July 2018), which states:

The title of the accredited degree programme must not be identical to an unaccredited programme awarded by the same Higher Education Institution.

For the ordinary degree, you will not have met the Course Learning Outcomes of the honours award; but instead you will be expected to have demonstrated the Course Learning Outcomes stated in Section 3 below.

The Engineering Council [defines](#) compensation as: “*The practice of allowing marginal failure (i.e. not more than 10% below the nominal passmark) of one or more modules and awarding credit for them, often on the basis of good overall academic performance*”, and condonement as: “*The practice of allowing students to fail and not receive credit for one or more modules within a degree programme, yet still qualify for the award of the degree*”.

In line with these definitions, and for the listed awards

- a. No module mark may be condoned, and a pass award made for any module in the stated degree programmes
- b. A student who is enrolled on one of the stated degrees can be compensated for a maximum of **one** module of a maximum of 20 credits
- c. The individual and group project modules within the awards cannot be considered for compensation under (b)
- d. The minimum mark for which compensation is allowed is 30%, given a normal pass mark of 40%

For instance, a student entering at Level 4 and leaving at Level 6 on an award of 360 credits could only be compensated in *one* 20 credit module, no matter how many modules are taken between the entry point at Level 4 and graduation at Level 6. Likewise, students on an Integrated Masters of 480 credits similarly can only be compensated in *one* 20 credit module within those 480 credits.

Students who fail to stay within the compensation limits above **must** be transferred to a suitable non-accredited award or withdrawn from the course at the student's option.

Professional Accreditation or Recognition Associated with the Course

Professional Body

Institution of Engineering and Technology (IET).

Accreditation/Recognition Summary

This course is accredited by the Institution of Engineering and Technology (IET). Students are eligible to apply for IET sponsored scholarships and bursaries, including the Future Talent award whilst studying; after graduation it improves employability by showing that the students have developed the appropriate skills and knowledge for an engineering career and professional registration.

‘In Year’ Work Placement Information

Summary

Should you decide to undertake a placement year, you will automatically be enrolled on the *Work Placement* module. You will then be supported during this placement by a named member of the Engineering teaching team and passing this *Work Placement* module enables the student to graduate with award title *BEng Electronics and Electrical Engineering (Sandwich)*. Failing the module, or withdrawing from the placement, has no consequences for your academic progression: all students who pass Level 5 are eligible to undertake

study at Level 6. Similarly, if you choose not to take the placement year, then you will automatically resume studies at Level 6 in the following academic year.

Even if you elect *not* to undertake a full placement year, you will still be encouraged and supported to undertake a shorter placement over the summer months between Level 4 and Level 5, or between Level 5 and Level 6. You will prepare for the shorter summer placements in the same manner as for the longer placements and will be supported by the *Employability and Placement* lead to find and apply for those opportunities. However, whilst valuable, these shorter summer placements will not be captured by the *Work Placement* module and so you will be ineligible for the '(Sandwich)' appellation to your degree title.

The availability or type of placements with employers may be restricted. Students will be advised about any new information or required revisions to confirmed arrangements as soon as this information becomes available.

Placement Delivery

The placement will be a minimum length of 32 weeks but can be longer by negotiation.

Location

You may be placed with various companies in the UK (or internationally if applicable). Further information on the placement process is provided by the course Employability Lead prior to option choices being made.

Approval

Whilst students source their own placements, they will need to meet requirements which will be outlined before module enrolment. All placement activity must be undertaken by the end of Level 4 and the September start date for the following year.

Timetable Information

Timetables for Semester 1 will be made available to students during induction week via:

- i) The Student Portal (MyBeckett)
- ii) The Leeds Beckett app

Any difficulties relating to timetabled sessions may be discussed with your Course Administrator.

Course Overview

Aims

The aims of the programme are to:

- To facilitate the provision of a quality learning experience for each student that fosters engagement with their programme of study and promotes independent study and life-long learning.
- To maintain a high quality, comprehensive and coherent electronic and electrical focussed curriculum which develops underpinning principles, management, entrepreneurship, digital literacy and offers a global appeal; informed by research, scholarly activity and practice to enhance each participant's career prospects.
- To develop professionals with a sound understanding of both electronic and electrical engineering in a holistic approach; and understanding the key features that link the two subject areas.
- To encourage the creative and appropriate application of technology to promote innovation and enterprise through the research project whilst enhancing students' employability skills.
- To promote ethical, social, legal and environmental awareness and professionalism in business development; supported by a strong appreciation of industry focussed skills and practice.

Course Learning Outcomes

At the end of the course, students will be able to:

1	Possess the core knowledge and understanding of scientific principles and methods necessary for electronic and electrical engineers; enabling their appreciation of its scientific and engineering context, and to support their understanding of historical, current, and future developments and technologies.
2	Be able to develop an ability to analyse a system through appropriate tools, methods and techniques, developing appropriate quantitative solutions and communicate the results of those analyses in a form appropriate to both specialist and non-specialist audiences.
3	Be able to creatively design innovative solutions to problems including an investigation and identification of the appropriate legal, economic, social, aesthetic and environmental constraints where applicable.
4	Have developed the skills to undertake projects to a professional standard by the consistent application and review of development, management and evaluation methods and techniques.
5	Have an understanding of the context of engineering knowledge; the characteristic tools, equipment, processes and products of the discipline of electronic and electrical engineering, and be able to use the technical literature and other information sources to develop that understanding over the course of their professional careers.

Teaching and Learning Activities

Summary

The delivery style will encourage independent and collaborative learning through team-based activities. This course enables many practical skills to be developed and students are encouraged to develop their personal interest through individual research. A number of delivery methods are used from guest lectures, group activities, online support and workshop activities.

Students are made aware of the goal of independence in learning and are given explicit guidance on those aspects of their learning for which they are responsible. Key opportunities for students in this regard include the *Engineering Skills* modules and guidance on the studying of individual modules.

Scheduled sessions will include the use of lectures, seminars and tutorials, and advantage will be taken of both technology and supportive activities to ensure that effective learning takes place. Some of those supportive activities strongly encourage the student to attend sessions that are not in themselves credit bearing, but which are designed to reinforce the concepts and skills introduced in the credit bearing modules.

These activities will include the use of simulations, role play, case studies, projects, practical work, work-based learning, workshops, peer tutoring, self-managed teams and learner managed learning.

The final research project has been designed around practice-centred product development, enabling students to focus their energies in developing future thinking and practical solutions to their sphere of work or career aspirations.

This course will feature a mix of blended learning, both online and in-person. Most lectures and all lab sessions will be live, with some online learning for specific modules.

Your Modules

This information is correct for students progressing through the programme within standard timescales. Option modules listed are indicative of a typical year. There may be some variance in the availability of option modules. Students who are required to undertake repeat study may be taught alternate modules which meet the overall course learning outcomes. Details of module delivery will be provided in your timetable.

Full Time Delivery

Level 4

Compulsory modules

Module title	Credits	Semester/ teaching period
Computers in Engineering	20	1
Electrical and Electronics Principles	20	1
Engineering Design Project 1	20	2
Engineering Systems and Data Acquisition	20	2
Digital Electronics	20	1 & 2
Maths for Electronics and Electrical Engineering	20	1 & 2
Engineering Skills 1	0	1 & 2
Number of credits of compulsory modules	120	

Level 5

Compulsory modules

Module title	Credits	Semester/ teaching period
Analogue Systems and Circuits	20	1
Control Systems	20	1
Communication Systems	20	1
Embedded Systems	20	2
Engineering Design Project 2	20	2
Electrical and Electronic Principles	20	2
Number of credits of compulsory modules	120	

Level 6**Compulsory modules**

Module title	Credits	Semester/ teaching period
Digital Signal Processing	20	1
Engineering Design	20	1
Power Electronics	20	2
Production Project	40	2
Number of credits of compulsory modules	100	

Option modules

Module title	Credits	Semester/ teaching period
Advanced Manufacturing Technology	20	1
Engineering Control	20	1
Number of credits of option modules a student should choose	20	

Part Time Delivery**Level 4****Compulsory modules**

Module title	Credits	Semester/ teaching period
Computers in Engineering	20	S1 / Year 1
Electrical and Electronics Principles	20	S1 / Year 1
Engineering Design Project 1	20	S2 / Year 1
Engineering Systems and Data Acquisition	20	S2 / Year 1
Digital Electronics	20	S1 & S2 / Year 2
Maths for Electronic and Electrical Engineering	20	S1 & S2 / Year 2
Engineering Skills 1	0	S1 & S2 / Year 1&2
Number of credits of option modules a student should choose	120	

Level 5

Compulsory modules

Module title	Credits	Semester/ teaching period
Analogue Systems and Circuits	20	S1 / Year 3
Control Systems	20	S1 / Year 3
Embedded Systems	20	S2 / Year 3
Engineering Design Project 2	20	S2 / Year 3
Communication Systems	20	S1 / Year 4
Electronic and Electrical Principles	20	S2 / Year 4
Number of credits of option modules a student should choose	120	

Level 6

Compulsory modules

Module title	Credits	Semester/ teaching period
Digital Signals Processing	20	S1 / Year 5
Power Electronics	20	S2 / Year 5
Engineering Design	20	S1 / Year 6
Production Project	40	S2 / Year 6
Number of credits of compulsory modules	100	

Option modules

Module title	Credits	Semester/ teaching period
Advanced Manufacturing Technology	20	S1 / Year 5
Engineering Control	20	S1 / Year 5
Number of credits of option modules a student should choose	20	

Assessment Balance and Scheduled Learning and Teaching Activities by Level

The assessment balance and overall workload associated with this course are calculated from core modules and typical option module choices undertaken by students on the course. They have been reviewed and confirmed as representative by the Course Director but applicants should note that the specific option choices students make may influence both assessment and workload balance.

A standard module equates to 200 notional learning hours, which may be comprised of teaching, learning and assessment, any embedded placement activities and independent study. Modules may have more than one component of assessment.

Assessment

Levels 4, 5 and 6 are assessed by a broadly even mix of coursework and examinations, with some practical assessments.

Workload

Overall Workload	Level 4	Level 5	Level 6
Teaching, Learning and Assessment	228 hours	204 hours	177 hours
Independent Study	972 hours	996 hours	1023 hours
Placement (optional)		1,200 hours
