BECKETT  
UNIVERSITY

# Course Specification

## MSc Medical Microbiology

Course Code: MSMBL

2026/27

# MSc Medical Microbiology (MSMBL)

## Applicant Facing Course Specification for 2026/27 Entrants

Confirmed at November 2025

### General Information

<b>Award</b>	Master of Science Medical Microbiology
<b>Contained awards</b>	Postgraduate Certificate Medical Microbiology Postgraduate Diploma Medical Microbiology
<b>Awarding body</b>	Leeds Beckett University
<b>Level of qualification and credits</b>	Level 7 of the Framework for Higher Education Qualifications, with 180 credit points at Level 7 of the Higher Education Credit Framework for England.
<b>Course lengths and standard timescales</b>	Start dates will be notified to students via their offer letter. The length and mode of delivery of the course is: <ul style="list-style-type: none"><li>• 12 months (full time, campus based)</li><li>• 24 months (part time, campus based)</li></ul>
<b>Part time study</b>	PT delivery is usually at half the intensity of the FT equivalent course, although there may be flexibility to increase your pace of study to shorten the overall course duration. Some modules may be delivered in a different sequence from that defined within this information set but the modules offered within each level are consistent. Please note that a work placement option is not generally available to PT students.
<b>Location(s) of delivery</b>	The majority of teaching will be at City campus but on occasion may be at Headingley campus.
<b>Entry requirements</b>	Admissions criteria are confirmed in your offer letter. Details of how the University recognises prior learning and supports credit transfer are located here: <a href="https://www.leedsbeckett.ac.uk/student-information/course-information/recognition-of-prior-learning/">https://www.leedsbeckett.ac.uk/student-information/course-information/recognition-of-prior-learning/</a>  Admissions enquiries may be directed to: <a href="mailto:AdmissionsEnquiries@leedsbeckett.ac.uk">AdmissionsEnquiries@leedsbeckett.ac.uk</a> .
<b>Course fees</b>	Course fees are confirmed in your offer letter. A breakdown of any additional costs is included on the online prospectus entry for this course.  Fees enquiries may be directed to <a href="mailto:Fees@leedsbeckett.ac.uk">Fees@leedsbeckett.ac.uk</a> .

## **Policies, Standards and Regulations**

<https://www.leedsbeckett.ac.uk/our-university/public-information/academic-regulations/>

Standard regulations apply to this course.

## **Professional Accreditation or Recognition Associated with the Course**

### **Professional body**

Royal Society of Biology (RSB)  
Institute of Biomedical Science (IBMS)

### **Accreditation/recognition summary**

#### **Royal Society of Biology:**

Masters Accreditation by the Society recognises programmes that support the development of specific skill sets, competencies and training which will enhance life and health science research. Accredited degrees fulfil the academic component of the Chartered Scientist programme.

The RSB is the leading professional body for the biological sciences in the UK. The Society represents over 18,000 biologists from all areas of the life sciences, as well as over 100 organisations which make up the diverse landscape of biology in the UK and overseas. The RSB offers members unique opportunities to engage with the life sciences and share their passion for biology.

Graduates from an RSB accredited MSc receive one year of free Associate membership of the RSB which will open up networks at a crucial time when applying for jobs.

Whichever area of biology you wish to gain a career in, membership will help you:

- Stay up to date with what is happening across the life sciences
- Gain additional recognition for your skills and experience
- Develop your professional network
- Demonstrate your support for the future of biology

#### **Institute of Biomedical Science:**

IBMS MSc accreditation ensures that a degree course demonstrates that students receive a wide-ranging, research informed scientific education and develop practical skills and experience that employers value.

## **Timetable**

Timetables for Semester 1 will be made available to students during induction week via:

- i) The Student Portal (MyBeckett)
- ii) The Leeds Beckett app

Any difficulties relating to timetabled sessions may be discussed with your Course Administrator.

## Key Contacts

**Your course director** Donna Johnson

**Your course administrator** Jo Featherby, [j.featherby@leedsbeckett.ac.uk](mailto:j.featherby@leedsbeckett.ac.uk)

## Course Overview

### Aims

The aims of the Masters in Medical Microbiology are:

- To broaden knowledge and understanding of the methods and implications of research in medical microbiology and the wider biomedical sciences field
- To enhance specialist knowledge in medical microbiology and associated disciplines
- To develop professional, research-oriented scientists with excellent communications skills and an innovative and flexible approach to problem-solving
- To develop advanced technical scientific

The programme of academic study is designed to develop reflective learners able to take responsibility and be accountable for the process of their learning and its practical application. This will lay the foundation for career-long professional development and lifelong learning to support best professional practice and the maintenance of professional and personal standards and aspirations.

Students will gain an in-depth insight into the importance and role of medical microbiology, with a particular focus on cutting edge areas such as the application of molecular and genomic techniques to microbiology, the diagnosis of microbial diseases and the relationship between the host and microbe in health and disease. Students will cover key areas of concern within medical microbiology such as the emergence of pathogens and antibiotic resistance. In addition, knowledge and skills will be developed covering population-level study of infectious diseases through the Epidemiology module.

The MSc in Medical Microbiology has been designed with the progression into the role of Medical Microbiologist in the NHS, but the knowledge base and skill set are also widely applicable to multiple career routes including research, public health monitoring and diagnostics.

### Course learning outcomes

At the end of the course, students will be able to:

1	Locate, critically evaluate and assess current research in medical microbiology and relate them to existing theoretical frameworks.
2	Plan, carry out and analyse a substantial piece of individual research with the implementation of appropriate research strategies, and communicate the results in a variety of formats, including an oral defence of the work.
3	Develop transferrable skills such as problem solving, decision making, time management, organisation, communication and team working.
4	Demonstrate the ability to carry out a range of laboratory and analytical techniques and procedures in line with those of a diagnostic or research laboratory.
5	Evaluate the potential impact of current developments in medical microbiology and propose novel approaches to further the knowledge base.
6	Critically appraise the knowledge base from different disciplines to promote innovative solutions to current and relevant issues and demonstrate the ability to formulate research questions.

## Teaching and Learning Activities

### Summary

The course is designed to provide a core of learning within the first semester to develop skills associated with the design and execution of an individual research project, along with the first module of a strand of specialist microbiology modules, develop students' knowledge of and skills associated with microbiological research. In semester 2 students complete the specialist taught element of the course and commence work on their laboratory project, which is completed during semester 2 and written up over the summer period. As this course is intended for those wishing to pursue a research career, there is considerable emphasis on the development of the research project and the development of scientific communication skills throughout the course. The core modules provide support for the development of critical and evaluative skills, awareness of current developments in microbiology and biotechnology and a structured approach to the planning and execution of a research project. Working with a supervisor/supervisory team, students draft their research protocol and complete the necessary Health and Safety and ethics clearance procedures, plan their work and carry it out methodically over the data collection period. Key milestones are included in the learning process to ensure that students are reflecting on their results to date and refining their experimental approach in light of this. The research project provides students the opportunity to develop the skills needed to plan and run a substantial piece of independent research and to experience a range of science communication methods.

This course proposes actions and targets to help incorporate cutting-edge approaches to learning, teaching and assessment into a re-energised curriculum that fully meets students' needs and prioritises the student learning experience, in line with the University's Learning and Teaching Strategy. Our approach concentrates on several key features:

- It is orientated towards the acquisition of generic key skills in addition to a specific knowledge base, enabling students to become independent lifelong learners
- Teaching and assessment methods facilitate the students' monitoring of their own progression through each module and the course and the effectiveness of this is also monitored

The course management team are committed to fostering a supportive inclusive learning environment.

### Your modules

This information is correct for students progressing through the programme within standard timescales. Students who are required to undertake repeat study may be taught alternate modules which meet the overall course learning outcomes. Details of module delivery will be provided in your timetable.

### Level 7

#### *Compulsory modules*

Module title	Credits	Semester/ teaching period
Science Communication	10	1
Public Health Epidemiology	20	1
Diagnostic Microbiology	20	1

Advanced Infectious Diseases	20	2
Professional Development	10	2
Advanced Research Methods	40	Year-long
MSc Research project	60	Year-long
Number of credits of compulsory modules	180	

### Part Time

Year 1

Module title	Credits	Semester/ teaching period
Science Communication	10	1
Advanced Infectious Diseases	20	2
Advanced Research Methods	40	Year-long
MSc Research project	60	Year-long

Year 2

Module title	Credits	Semester/ teaching period
Public Health Epidemiology	20	1
Diagnostic Microbiology	20	1
Professional Development	10	2
MSc Research project	As above	Year-long
Number of credits of option modules a student should choose	180	

## Assessment and Scheduled Learning and Teaching Activities

The assessment balance and overall workload associated with this course are calculated from core modules. They have been reviewed and confirmed as representative by the Course Director.

A standard module equates to 200 notional learning hours, which may be comprised of teaching, learning and assessment, any embedded placement activities and independent study. Modules may have more than one component of assessment.

### Assessment

#### Level 7

Modules are assessed by coursework, examinations and practical assessments.

Assessments reflect the communication methods used in Biomedical Sciences research and key skills such as the design of research and the formulation of grant applications. In modules where there is a need for students to demonstrate both breadth and depth of knowledge and skills, more than one form of assessment is used.

The assessment journey for this master's level course is geared towards the goal of students producing a master's level research project thesis. This involves acquisition of the skills necessary to conceive a

research question via critical evaluation of pre-existing scientific literature, prepare outlines of project ideas and develop laboratory practical competencies. These skills are developed and assessed through the core and specialist modules prior to the beginning of the research project. Students manage their own research project thereby developing leadership skills and by the completion of the project competencies in data presentation and analysis are both developed and assessed. The assessment journey therefore develops and assesses the range of skills involved in scientific research, from conception of a research project idea to delivery and presentation of results. Assessments earlier in the course which deal with critical evaluation of literature, completion of ethics procedures and risk analysis procedures are put into practice within the project module to consolidate these skills.

## Workload

Overall Workload	Level 7
Teaching, learning and assessment	325 hours
Independent study	1475 hours
Placement	-
