

Having dementia and cancer created accumulated complexity with...

...sharing and understanding information

- Oncology staff often lacked access to dementia training/education
- Dementia was not well recorded in hospital records
- People with dementia and their families often struggled to understand information about cancer diagnosis and treatment options

“They don’t say it in English... That’s the most frightening part about it... I cannot understand what is happening to me.”

Gentleman with dementia

“If they had explained it better I probably would have got him treatment.”

(Wife)

“I didn’t feel it was my place to say, excuse me, but my father can’t remember what day it was.”

Son
